

Vassilis Andronis is a Rural and Surveying Engineer of the National Technical University of Athens (NTUA), with a PhD in Photointerpretation and Remote Sensing. He has been a permanent member of the NTUA Remote Sensing Laboratory since 1993, having extensive educational experience, participating in almost all undergraduate and postgraduate courses of the Remote Sensing Laboratory. He has significant expertise in the areas of multispectral/hyperspectral remote sensing, digital image processing and their applications, computational statistic and optimization of machine learning algorithms, and in the collection, processing and analysis of geo-information and big data. He has worked on many research projects and has great experience in various operating systems as well as relevant programming skills in various languages. He is the author/co-author of several publications in scientific journals and proceedings of conferences and workshops until 2023.
